PRODUCT SELECTION GUIDE

HYDROCEROLTM ANDEXCELITETM CHEMICAL FOAMING AGENTS

A.01

Hydrocerol[™] and Excelite[™] Chemical Foaming Agents (CFAs) are used across a wide range of polymers and applications. Available in masterbatch pellets, powder form or liquid, they utilize endothermic, exothermic or an endothermic/ exothermic blend of chemistries to fit the required applications.

CFAs can be used to improve production efficiencies and preserve aesthetic appeal. They are commonly used for:

- Weight reduction/cost savings
- Sink mark removal
- Shrinkage and warpage reduction
- Nucleation
- Assisting direct gas foaming

NOTE:

Low gas yield products are optimized for assisting direct gas injection, nucleation, warpage reduction and sink mark removal. Moderate and high gas yield products are optimized for weight reduction, warpage reduction and sink mark removal. Chemistries and gas initiation temperatures are available for a wide range of resins.

These charts include details for standard CFA products. A number of CFA concentrations can be tailored to processing requirements, feeder capabilities, gas yield optimizations, and cost optimization. Customized formulations can include additional additives to modify properties such as surface appearance, bubble size, or slip and release properties.

Produ Nam	ıct e	Material/ Product Code	Туре	Initiation Temp, C	Optimum Gas Yield Temp, C	Gas Yield Range, cc/g	Uses/ Applications	Usage Resins
POWDE	R							
Hydroce BIH	erol	PEAUFF	Endo	140	160	140-150	 Weight reduction Sink mark removal Warpage reduction 	EVA, polyethylene, PE copolymers, TPEs/TPOs, PVC
